**1**

**Where if? Using spatial, building-stock-driven simulations to explore construction circularity strategies in Gothenburg, Sweden**

***Jonathan Cohen***

*Chalmers University of Technology*

**2**

**Coupling agent-based modelling with territorial LCA to support agricultural land-use planning**

***Tianran Ding***

*Luxembourg Institute of Science and Technology*

**3**

**Empirical agent-based modelling of circular business models: incorporating dynamic LCA and MFA from a consumption perspective**

***Ryu Koide***

*National Institute of Environmental Studies & Technical University of Delft*

---

Why do we need **complexity science**  
methods in **Industrial Ecology**?

*Image from sketchplanations.com*

**Production and consumption systems are complex** since they are highly intertwined networks that results from the human **interactions**

**Complex system**

**production and  
consumption systems**

**Complex system**

**Complex Adaptive System (CAS)**

**production and  
consumption systems**

**Complex system**

**Complex Adaptive System (CAS)**

**Socio-technical system (STS)**

**production and  
consumption systems**

**Agent Based Modelling (ABM)** is a popular paradigm that allows to study **complex systems**

# Life-Cycle Thinking for Complex Systems Initiative

[complexity.lca@gmail.com](mailto:complexity.lca@gmail.com)

[complexitylca.github.io](https://complexitylca.github.io)

- **Life-Cycle thinking for sustainability**  
(e.g., LCA, Input-Output, etc )
- **Complexity-driven methodologies**  
(i.e., ABM, network analysis, simulation methods)
- **Complex Adaptive Systems**  
(e.g., socio-technical systems, techno-ecological networks)

# Life-Cycle Thinking for Complex Systems Initiative

[complexity.lca@gmail.com](mailto:complexity.lca@gmail.com)

[complexitylca.github.io](https://complexitylca.github.io)

- Promote the use of complexity-oriented methods in combination with life-cycle thinking approaches.

> **provide a platform**

1

Where if? Using spatial, building-stock-driven simulations to explore construction circularity strategies in Gothenburg, Sweden

**Jonathan Cohen**

*Chalmers University of Technology*

2

Coupling agent-based modelling with territorial LCA to support agricultural land-use planning

**Tianran Ding**

*Luxembourg Institute of Science and Technology*

3

Empirical agent-based modelling of circular business models: incorporating dynamic LCA and MFA from a consumption perspective

**Ryu Koide**

*National Institute of Environmental Studies & Technical University of Delft*

**Jonathan COHEN, PhD**

> Chalmers University of Technology

**Where if? Using spatial, building-stock-driven simulations to explore construction circularity strategies in Gothenburg, Sweden**

**Tianran DING, PhD**

> Luxembourg Institute of Science  
and Technology

**Empirical agent-based modelling of circular  
business models: incorporating dynamic LCA  
and MFA from a consumption perspective**

**Ryu KOIDE, PhD**

> National Institute for  
Environmental Studies

> Technical University of Delft

**Coupling agent-based modelling with  
territorial LCA to support agricultural  
land-use planning**

# Summary

1

**Complex decision making**  
**(Spatiality and circularity in construction)**

2

**Complexity on the production**  
**(farmers' behaviors and interventions)**

3

**Complexity on the consumption**  
**(consumers' behaviors affect circularity strategies)**
